## Documentation for Freelancer – Professional Flat Responsive Theme

We really appreciate that you bought our template. We hope that it will serve you well. If you like our template just let us know or you can stay in touch with us through Facebook or Twitter. It would be great if you recommended us to your friends and colleagues. If you have some questions just send a message we are looking forward to your emails.

Your **Pixelized** team

## List of plugins

- **Animate**
- **Creative Brands**
- **FontAwesome**
- **Easy pie chart**
- **Modernizr**
- **Waypoints**

## Animate

It is an awesome CSS3 plugin which allows us to animate individual parts of our themes. Example is best so in the index page you can see rounded image. When you refresh the page this object is slightly slide in down if you want to change this effect simply. If you don't want this effects just simple open index.html in some editor and remove all classes sp-effect1, sp-effect2, sp-effect3, sp-effect4.

In this scheme we combine animate with waypoint plugin so if you want to change this effect open custom.js file and edit lines following lines. Instead of „fadeInLeft“ just simply try another effect eg. „bounceIn“

```
80 $($('.scrollpoint.sp-effect1').waypoint(function() {$(this).toggleClass('active');$(this).toggleClass('animated fadeInLeft');},{offset:'90%'});
81 $($('.scrollpoint.sp-effect2').waypoint(function() {$(this).toggleClass('active');$(this).toggleClass('animated fadeInRight');},{offset:'90%'});
82 $($('.scrollpoint.sp-effect3').waypoint(function() {$(this).toggleClass('active');$(this).toggleClass('animated fadeInDown');},{offset:'90%'});
83 $($('.scrollpoint.sp-effect4').waypoint(function() {$(this).toggleClass('active');$(this).toggleClass('animated fadeIn');},{offset:'60%'});
```

For full documentation and list of different types of animations go to <http://daneden.me/animate>

## Creative Brands

It's a CSS add-on more than plugin. This add-on edits appearance of logos social sites in the footer. For more <http://brands.pixelized.cz/>

## Font Awesome

It's one of the most powerful tools. Font Awesome gives you scalable vector icons that can instantly be customized — size, color, drop shadow, and anything that can be done with the power of CSS. Let's take a look. In the index on the „My latest work“ section you can find four icons on the left. This is a font awesome so let's say we want to change them to more suitable for your purposes. Open the index.html in some editor and find the line number 325.

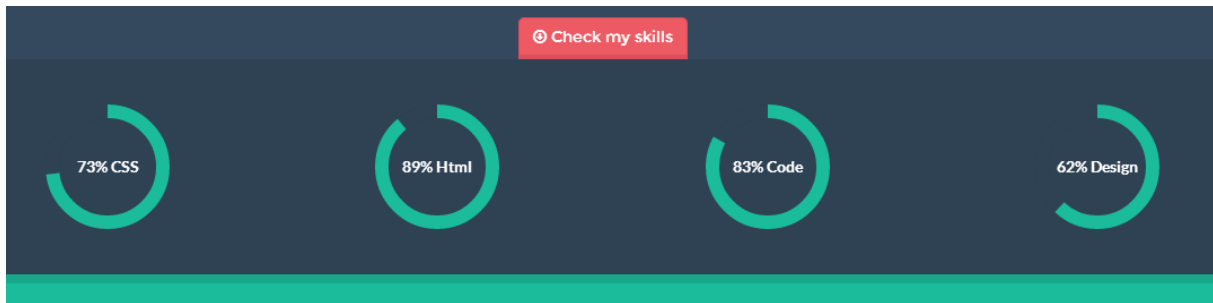

```
<div class="pull-left showcase-icon"><i class="fa fa-puzzle-piece"></i></div>
```

Here you can change appearance of this icon just simply remove class „fa-puzzle-piece“ and type for instance „fa-money“. Now save the changes and refresh the index.html page and icon is different.

For full documentation how to customize this plugin (size, color, rotation etc.) and full list of different types of icons go to <http://fontawesome.io/>

## Easy pie chart

This plugin allows us simple circle loading. On this you can show your skills. You can find this plugin by clicking on the button „check my skills“ in second „about“ section.

If you want change percentages of this pie charts open index.html in some editor and find following lines.

```
205     <div id="skills">
206         <div class="container">
207             <div class="row"><!-- Toggle my skills start -->
208                 <div class="col-md-3">
209                     <div class="chart" data-percent="73">73% CSS</div>
210                 </div>
211                 <div class="col-md-3">
212                     <div class="chart" data-percent="89">89% Html</div>
213                 </div>
214                 <div class="col-md-3">
215                     <div class="chart" data-percent="83">83% Code</div>
216                 </div>
217                 <div class="col-md-3">
218                     <div class="chart" data-percent="62">62% Design</div>
219                 </div>
220             </div><!-- Toggle my skills end-->
221         </div><!-- Container end-->
222     </div>
```

Change percentage as you like by edit data-percent="73" to anything else. Then edit description 73% CSS to whatever you want save changes and it is done.

## Modernizr

This plugin is used in „references“ section in hover effect on every each reference image. For full documentation go to <http://modernizr.com/docs/>

## Waypoints

You can see this plugin when you scrolling down the page and each section is showing when you scroll there. If you want to remove this effects you have to open index.html in some editor and remove all classes „scrollpoint“ and classes „sp-effect4“ „sp-effect3“ „sp-effect2“ „sp-effect1“.

For full documentation of this plugin go to <https://github.com/imakewebthings/jquery-waypoints/>

## Vertical carousel

This plugin we use in the very first section to changing text.

For full documentation go to <https://github.com/tutorialdrive/Bootstrap-Vertical-Thumbnail-Carousel>

## Contact

If you have some questions send an email to [info@pixelized.cz](mailto:info@pixelized.cz). We gonna help you in every way to correctly set up the theme.
